

# enviren

NEW

## Introducing our new range of **compostable** products!

Medical consumables made from Sugarcane Bagasse

- ✔ Strong and durable eco-friendly resource
- ✔ Leak proof
- ✔ 100% compostable products
- ✔ Suitable for use in healthcare settings

## FAQ

### 1. What is industrial composting and how does it differ to home composting?

Industrial composting is the large-scale processing of organic waste to efficiently convert it into nutrient-rich compost. Once organic waste is received at an industrial composting facility it is sorted, placed into a gigantic digester (which has the optimum temperature, humidity, oxygen levels for bacteria), filtered, and left to mature for a few weeks to complete the composting process.

The temperature, humidity and oxygen conditions, as well as the bacteria present in home composters vary significantly from site to site. Because of this, some products are not home compostable as they need the exact environment to break down into compost.

### 2. How should I dispose of an EnvirOn product?

EnvirOn products can be placed into the food organics and garden organics (compost) bin provided by your council.

### 3. Are these products reusable?

EnvirOn products have not been designed or made to be washed and reused.

### 4. What happens if I throw it in the bin?

Unfortunately, when placed in with general waste, EnvirOn products will end up in landfill where conditions do not allow composting to happen. As with all landfill waste when it decays, the anaerobic (lack of oxygen) conditions contribute to the release of greenhouse gas emissions into the atmosphere.

### 5. What is the shelf life of EnvirOn products?

Sugarcane bagasse products, if stored in their original packaging and in the recommended conditions, have a shelf life of up to 36 months.

### 6. How should I store my EnvirOn products?

EnvriOn products must be stored in a dry and cool environment, away from direct sunlight.
